Gary and Lorrie Tanner

*Praise the LORD, oh, my soul;
all my inmost being praise His Holy name.
Praise the LORD, oh, my soul,
and forget not all His benefits—
who forgives all your sins, and heals all your diseases;
who redeems your life from the
pit and crowns you with love and compassion,
who satisfies your desires with good things
so that your youth is renewed like the eagle's.
The LORD is compassionate and gracious,
slow to anger, abounding in love.
He does not treat us as our sins deserve
or repay us according to our iniquities.
As a father has compassion on his children,
so the LORD has compassion on those
Who fear Him." Ps. 103: 1-5, 8, 10, 13*

*We praise Him for who He is and all His mighty
deeds, may He be honored and glorified in all we do!*

COMMENTS FROM THE SALE MANAGER:

Mississippi's Largest Selection of Angus Seedstock!

Selling more than 100 registered Angus bulls from Tanner Farms, rich in the best of Angus pedigrees and performance. Gary and Lorrie Tanner, along with their family and crew, present this power-packed offering of outstanding bulls who range in age from 14-16 months. They are semen-tested, acclimated and ready to go to work. These bulls are backed by a 100% satisfaction guarantee. The depth and dimension of this offering is impressive.

With the strong demand in value for Angus cattle, it is a great time to invest the best genetics possible. Please make plans to be on hand sale day to take advantage of this opportunity.

Please feel free to call on us at the American Angus Hall of Fame if we can be of assistance with your selection decisions.

Sincerely,

Tom Burke

Association Perspective
Low-birth-weight EPDs
Looking at a single trait on EPDs costs performance and money.

by David Gazda,
regional manager,
American Angus Association

One of the most common concerns I hear from commercial producers using Angus genetics is the size of calves at birth. Instinctively, my first thought is that the producers experienced calving problems due to the calves being too large at birth. However, the problem generally tends to be just the opposite, where the calves have been extremely small and light at birth, struggled to nurse and never caught up with their contemporaries from a growth standpoint.

Upon visiting with the producer and reviewing the bull's registration certificate and EPD profile, I usually discover a common theme – the producer had been selecting primarily for calving-ease, low-birth-weight-EPD bulls with no regard to any other traits. This is certainly understandable if the producer is breeding heifers and needs a certain level of calving ease delivered by low-birth-weight Angus bulls. Furthermore, in the southeast, like many other areas of the country where cow herds are relatively small, the herd bull may have to be multipurpose, breeding both heifers and mature cows with, again, emphasis being placed on calving ease.

At the risk of being controversial, many of these small calf scenarios could be eliminated if the producers would simply be willing to accept more birth weight, particularly when breeding mature cows. One only has to attend a production or test station sale to witness firsthand how the heavier-birth-weight-EPD bulls are penalized and therefore sell at a substantial discount. Have calving-ease and low-birth-weight EPDs been overemphasized to commercial producers? Maybe; maybe not.

Regardless, the commercial producer equates Angus genetics with calving ease, fertility, maternal strength and carcass quality, and as seedstock producers we are challenged daily to deliver those genetics.

In closing, producers need to select bulls that allow them to reach their production goals; however, single-trait selection based upon an individual's birth weight EPD may needlessly sacrifice additional pounds at weaning. Next time you are in the market for a bull, don't discriminate against a little more birth weight EPD. You will still receive the calving ease you have always expected from Angus and a few extra dollars in your pocket at weaning!
